Summary

Backend-focused Software Developer with a strong foundation in designing **high-volume, low-latency applications** using Java and Spring Boot. Committed to the **full software development lifecycle** and writing clean, efficient code to optimize performance for mission-critical systems.

Education

Misrimal Navajee Munoth Jain Engineering College

Nov 2022 – May 2026 (Expected)

Bachelor of Technology in Information Technology (CGPA: 8.2)

Experience

Infosys Springboard | *Virtual Intern (Web Platform Development)*

Aug 2025 – Oct 2025

- Contributed to the **full product development lifecycle** by building backend modules for a **Medical Scheduling System**, strictly adhering to **clean code** principles.
- Optimized database performance** for patient records, reducing appointment booking time by **40%** and ensuring high system availability.

Cothon Solutions | *Java Developer Intern*

Mar 2025 – May 2025

- Programmed a secure **LMS backend** using Spring Boot, ensuring all designs complied with **technical specifications** and security standards.
- Integrated JWT authentication and Spring Scheduler workflows, reducing manual allocation efforts by **35%** while driving a **22% increase** in engagement.

Projects

Microservices-Based E-Commerce Platform | *Java 17, Spring Boot, Kafka, Docker*

- Designed a **high-volume** microservices system using **Apache Kafka** for **low-latency** asynchronous communication between Product, Order, and Inventory services.
- Prepared and released** software components by containerizing with **Docker** and configuring Spring Cloud Gateway for centralized routing.

AI-Powered Transaction System | *Spring Boot, FastAPI, Redis, FinGPT*

- Constructed a **mission-critical** financial tracking system, utilizing **Redis caching** to process **1,000+ transactions in under 5 seconds**.
- Integrated FinGPT and regex-based rules for intelligent categorization, eliminating external API costs while maintaining **optimal performance**.

Smart Healthcare Management System | *Spring Boot, MySQL, Weka API*

- Developed secure backend services for patient record management, ensuring data integrity and compliance with **design specifications**.
- Integrated Machine Learning (Random Forest algorithm) via **Weka API** to enable predictive disease risk analysis and automated alerting.

Skills

- Languages:** Java, JavaScript, HTML/CSS.
- Frameworks & Technologies:** Spring Boot, REST APIs, Hibernate, JUnit (Testing).
- Databases:** MySQL, Redis (NoSQL).
- Tools & Cloud:** Git, Docker, Postman, AWS (EC2, S3).
- Core Concepts:** Data Structures & Algorithms, OOP, DBMS, Computer Networks.

Certificates

- Java Data Structures & Algorithms + LeetCode Exercises** - Udeemy
- Oracle Java Foundations** - Coursera
- AWS Concepts** - DataCamp

Achievements

- Shortlisted for Round 2 of **GHCI 25 AI Hackathon**.
- Selected for **Microsoft Copilot Masterclass (Skill Nation)** for hands-on exposure to AI-powered productivity tools.
